

RIH TREES ARE RECYCLED BY WOOD GUILD MEMBERS

The day before the trees are cut down.

And the day after...

Here they are at Brock S.S.School.

The SD's portable Sawmill is set to work.

Slabs being cut at 2" thickness...

Dr. S and Tom B. pack the slabs to the pickup.

Here are crotch and large pieces for turning.

Another view of the turnable wood.

Beautiful wood grains apparent in this stuff.

Another view of the "Y" grain in this slab.

Derry applies some end-sealer to the missed pieces.
This is done so the wood dries evenly to prevent
cracking from the ends.
